

# Remote Assistance

## PRICING SHEET

Bring in the people you need with just a tap

[Watch video](#)

Solve problems on the spot	Visualize and share critical information	Make on-site visits from a distance
Working side-by-side with experts in remote locations, allows your employees to share what they see, walk through the process step-by-step, and solve problems efficiently in real time.	Your employees can pull critical information into view while staying focused on the task. This is how collaborative problem-solving at full speed should be done.	Reduce on-site visit costs with remote inspections, while maintaining a high level quality check. Integrate video, screenshots, and annotations.
